DETAILED ACTION

Allowable Subject Matter

1. Claims 1-56 are allowed.

1. The following is an examiner's statement of reasons for allowance: many references in the art disclose a vehicle occupancy sensing system (figure 4) comprising a first electrode connection (E4) and a second electrode connection (E3); a circuit parameter sensor in the form of a detecting circuit (14) connected with the first electrode connection and the second electrode connection, such as found in Saito et al. (US 6,043,743). The prior art of record does not teach or suggest, in the claimed combination, a vehicle occupancy sensing system comprising a controller coupled to the circuit parameter sensor, the controller operable to obtain a first parameter reading for the first electrode connection and a second parameter reading for the second electrode connection, and operable to determine an occupancy characteristic based on a product of load impacts determined based on the first and second parameter reading with respect to a first unloaded electrode connection reading and a second unloaded electrode connection reading.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
